

Overview

This document will provide details on how Pathgather integrates the LinkedIn Learning catalog metadata, as well as instructions on how to enable the LinkedIn Learning catalog for your organization's Pathgather instance.

In order to enable this integration, you must have a user account with administrative privileges to your organization's Pathgather instance, and have LinkedIn Learning API keys (**client ID** and **client secret**) from your organization's LinkedIn Learning instance (or the ability to generate them).

Integration Details

The Pathgather integration of the LinkedIn Learning catalog pulls in the following course metadata from the LinkedIn Learning APIs:

title (e.g. Learning Bash Scripting)

description (e.g. Bash, or the Bourne Again Shell, is a widely popular command-line interpreter for administration and programming tasks...etc)

course launch URL (e.g. <https://www.linkedin.com/learning/learning-bash-scripting>)

course level (e.g. beginner)

course duration (e.g. 1h 25m)

If your organization uses Single Sign-On (SSO) to access LinkedIn Learning, your API keys also provide Pathgather with SSO-enabled deep-links, which are then used for launching LinkedIn Learning content from Pathgather. Otherwise, Pathgather uses the standard course launch URLs when launching LinkedIn Learning content.

Instructions

1. Log into your Pathgather instance as a user with administrative privileges.
2. Select your avatar from the top right, then select **Admin mode** from the drop-down menu.
3. From the left-side navigation rail, select the **gear icon** () to go to **Settings**.
4. Select the **Integrations** tab from the horizontal navigational menu.
5. Select the **LinkedIn Learning** app tile to open the configuration settings.
6. Select the toggle switch to **Enabled** and enter your LinkedIn Learning API keys (**client ID** and **client secret**).
7. Select the **Update integration** button at the bottom of the modal to finish.
